Ministry of Health and Population
Department of Health Services
Family Welfare Division

Workshop on Implementation and Scaling Up of High Impact Practices of Family Planning in Nepal

Organized by the Ministry of Health & Population, Nepal in collaboration with FP2030 & ADRA

FP2030: A Global Family Planning Partnership

IMPLEMENTATION AND SCALING UP
THE HIGH IMPACT PRACTICES
OF FAMILY PLANNING IN NEPAL

23-24 SEPTEMBER, 2024

The FP2030 Global Support Network

A strategy to change the world

2030 Agenda

Advance recognition and prioritization of family planning by expanding partnerships and leveraging the 2030 agenda

Financing

Promote increased, diversified, and efficient use of SRH financing to ensure sustainability

Youth

Prioritize the rights of adolescents and youths and of marginalized and stigmatized groups to improve their SRH outcomes

Best Practices

Support scale-up of evidence-based practices to accelerate impact

RESOURCE

Resource local actors to solve local issues

DATA

Leverage and expand the use of data for evidence-informed decision-making

PERFORMANCE

Improve the performance of our people, systems, and processes to drive results

Country Engagement Approach

FP2030 Commitment

Foundational to
consequent
country
engagement
strategies

Partner Alignment

To socialize the
commitment to
all partners in
charge of
implementation,
financing and
results
reporting

Actionable Plan

FP2030 leads
and ensures all
countries that
make a
commitment
have an
actionable plan
– could be a
CIP, FP Action
plan including
use of the FP
Goals model.

Accountability Framework

The framework
exists, and is
institutionalized
at a country
level including
working with
civil society and
other partners

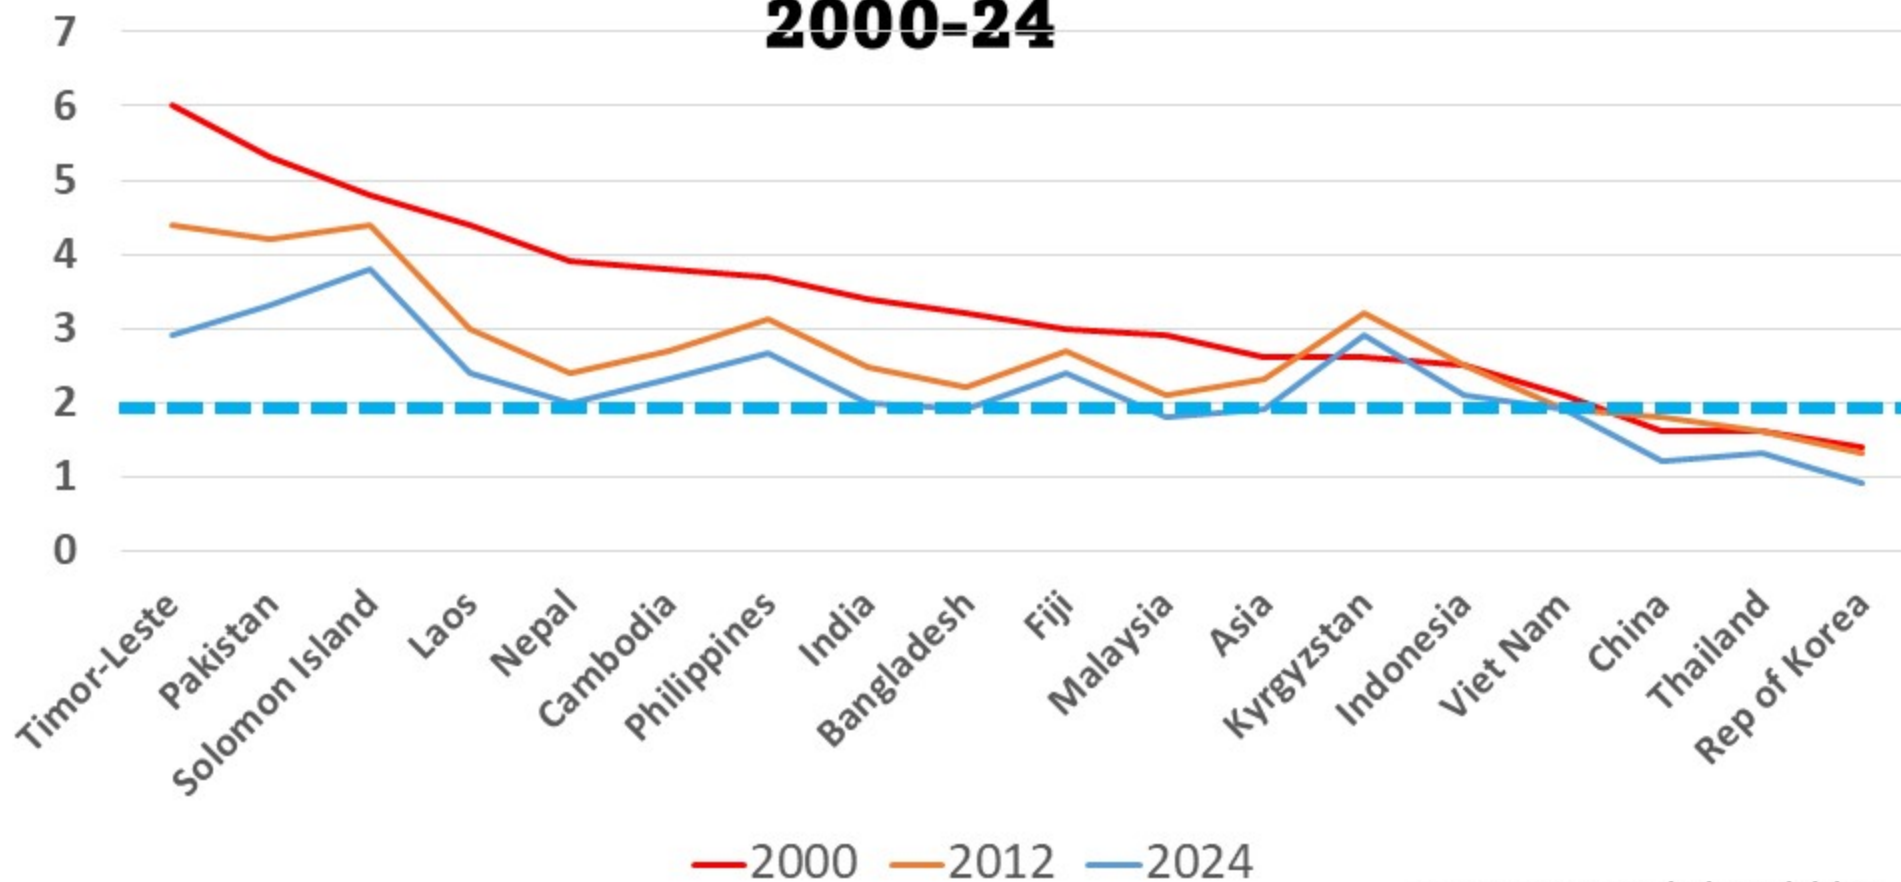

Measuring and Reporting Results

Progress and
results are
captured at a
country level
including self-
reporting.

The Changing Landscape

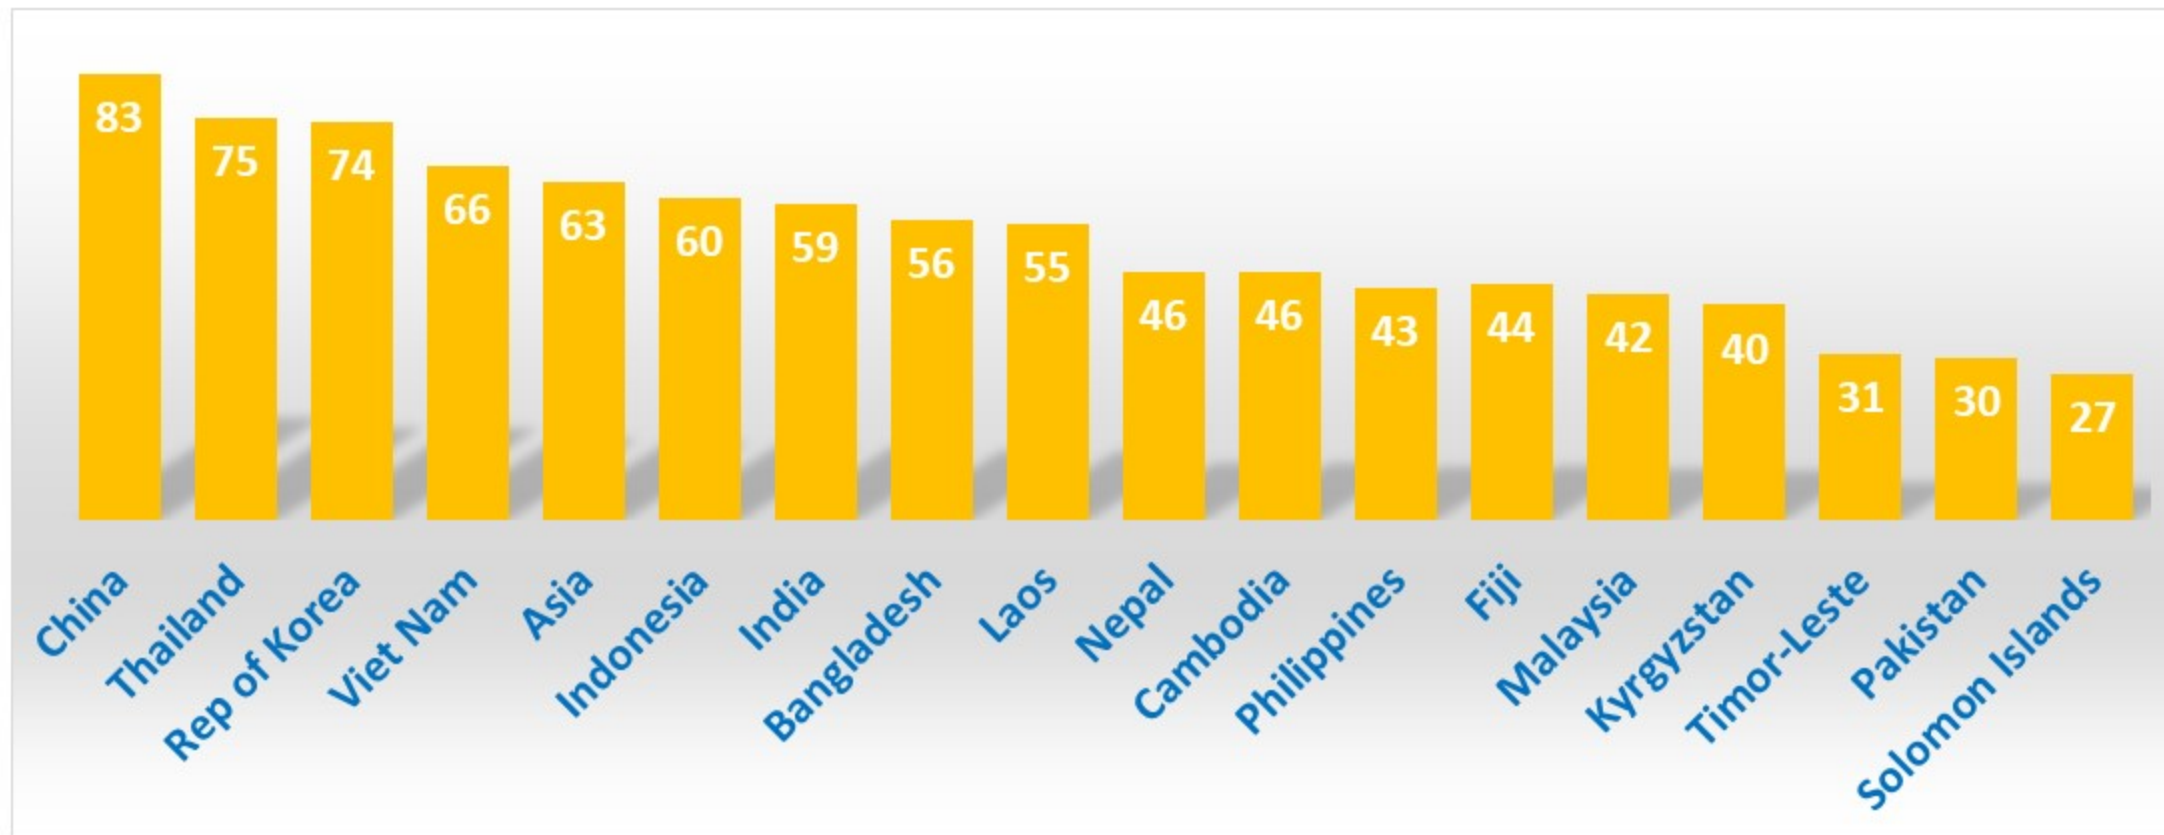

- Demographic patterns are shifting globally, with birth rates falling in most countries.
- Declining fertility rates raise concerns about shrinking and aging populations, seen as threats to national welfare, healthcare, and the economy.
- These changes have sparked debates on reproductive rights, impacting women's freedom and autonomy as they face pressure to reproduce for perceived national interests.
- Understanding why women and men have fewer or more children than they desire is crucial for creating policies and programmes that help them achieve their fertility goals.
