What is the proven high-impact practice in family planning service delivery?

Support mobile outreach service delivery to provide a wide range of contraceptives, including long-acting reversible contraceptives and permanent methods.

Heidi Brown, Marie Stopes, Tanzania

What is the high-impact practice in family planning?

Engage communities and health sector actors in a collaborative process to jointly identify problems, and to implement and monitor solutions to hold each other accountable for improvements in the quality and responsiveness of family planning services.

Key Implementation Components Example: IPPFP

Key implementation components are **agreed upon standards to implement a practice and ensure it is high impact.** They are the key ingredients that make a HIP a HIP.

The key implementation components were derived from the “how to” section of the HIP briefs and refined and validated with members of HIP Technical Expert Groups.

To date, key implementation components have been developed for the following HIPs: **Immediate post-partum FP, community health workers, pharmacies and drug shops, and mobile outreach.**

Immediate Postpartum Family Planning (IPPPF)

- Assure availability of supplies, equipment, and methods in the facility for all clients desiring a method during the immediate postpartum period.
- Train different cadres of providers in the delivery of IPPFP counseling and service provision.
- Ensure staff availability for the provision of IPPFP services and products before client's discharge and during both the antenatal and immediate postpartum period.
- Monitor, assess, and report on counseling and uptake of methods for immediate postpartum clients.
- Engage health facility leadership and staff to promote IPPFP.
- Strengthen linkages to community programs to promote awareness of ANC and postpartum (including immediate) contraceptive options.
